Driving The Gas, LNG, Hydrogen & Energy Agenda To Achieve Net-Zero Emissions

The **5th Japan Energy Summit & Exhibition** took place on **28 February - 2 March 2023** at the Westin Tokyo. As the global platform that convenes **senior stakeholders** from across the value chain, **Japanese buyers, government representatives** and **international suppliers** met to discuss the pertinent topics affecting the industry today, including the **critical role of LNG and gas in providing energy security**, the **shift to hydrogen & ammonia** and the **application of low carbon solutions**.

Together with the newly launched **international exhibition**, the event offered boundless **networking opportunities** across the show floor and industry sessions.

Key Takeaways From The Summit

JAPAN ENERGY SUMMIT & EXHIBITION | THE WESTIN TOKYO | 28 FEBRUARY - 2 MARCH 2023

Energy leaders from companies across the LNG, gas, hydrogen & ammonia value chains gathered in Tokyo for the **Japan Energy Summit & Exhibition** to share **industry perspectives** throughout a packed, business-focused agenda that reflected on the **ever-changing demands** of the Japanese and wider Asia-Pacific markets.

Led by a Keynote Address delivered by **Takeshi Soda**, Director of Petroleum & Natural Gas Division at the **Ministry of Economy Trade & Industry (METI)**, outlining the upcoming priorities and objectives for Japan's energy sector, followed by a global perspective on energy security by **Joseph McMonigle** of the **International Energy Forum (IEF)**, the opening sessions on LNG & Gas and Hydrogen, respectively, set the buoyant tone of the event for the three days.

Senior representatives from some of Japan's key energy operators in **JERA**, **Tokyo Gas & Osaka Gas**, explored the ongoing opportunities for LNG & Gas in Japan's energy mix, alongside supply perspectives from **Venture Global LNG** & **Cheniere Marketing Ltd**. Next up, and closely linked in terms of Japan's future energy make-up, **Daryl Wilson**, Executive Director of the **Hydrogen Council**, chaired a critical session diving into how Japan can progress to becoming the world's first hydrogen economy, alongside Japan's **New Energy and Industrial Technology Development Organisation (NEDO)**, **Japan Bank for International Cooperation (JBIC)**, **Kawasaki Heavy Industries** and **King & Spalding**.

Key Takeaways From The Summit

This set the scene for lively discussions on energy trading and financing before a series of wide-ranging presentations and exchanges on innovative technologies from leading providers including **Topsoe**, **ABB**, **Tallgrass** & **Helical Fusion**, which can help the industry to decarbonise energy markets.

A key highlight of the event took place on the morning of Day 2, with the **Women in Energy Networking Breakfast** - an important addition to this Summit, and extremely well-received by the industry; a clear example of the huge value to be unlocked in Japan's workforce. Pertinent sessions on **zero-emission mobility** and perspectives on **decarbonisation opportunities** from the maritime industry and other energy-intensive sectors led the discussions throughout Day 2, alongside a well-rounded panel discussion on **developing new markets & applications for ammonia**, with key learning applicable beyond the shores of Japan.

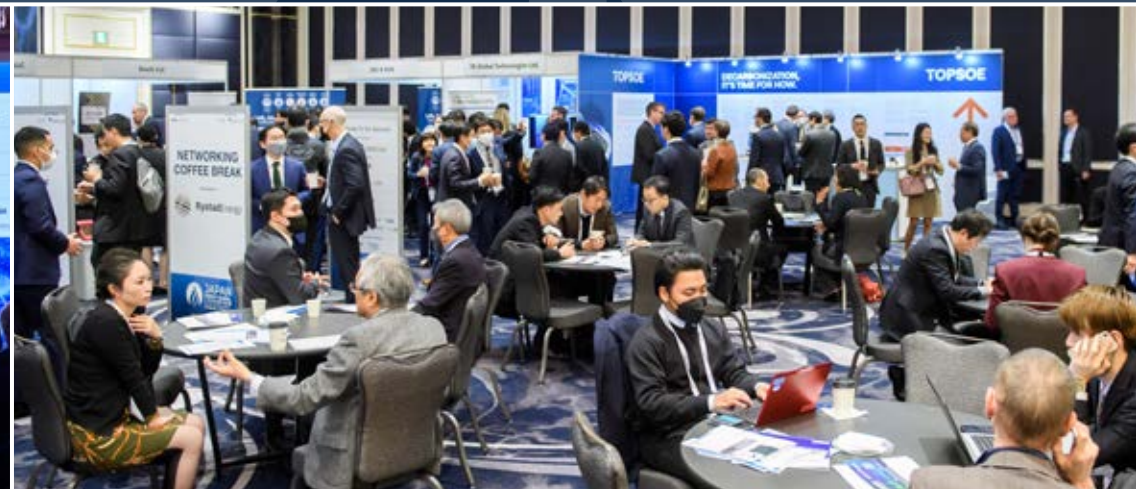

The final day hosted sessions of equal standing, featuring a topical discussion on **carbon credits** based around an overview on Japan's eagerly anticipated new emissions trading system, the **"GX League"** by METI, which is due to launch in April 2023. This was followed up by an expansive and thought-provoking panel, where **METI**, **IEA**, **Hitachi**, **Air Liquide**, **The Institute of Energy Economics, Japan (IEEJ)**, and **HyWealth** shared perspectives on how Japan can reach its carbon neutrality target by 2050.

With the global impact of the recent **Inflation Reduction Act (IRA)** announcement from USA touching many of the discussions throughout the week, the Summit's Chair, **Nobuo Tanaka**, Former Executive Director of the **International Energy Agency (IEA)**, reflecting on the insights shared, highlighted the need for regulation and meaningful incentives to be delivered in order for Japan to keep pace, both as a world leader and an attractive market for investment, in the energy transition.

Women in Energy Networking Breakfast

The **Women in Energy Networking Breakfast** is a **unique feature** for the Japanese energy industry and had a fantastic turnout on the morning of **Day Two** of the **Japan Energy Summit & Exhibition**. It brought together executives from across the energy value chain to discuss the **latest industry trends**, and **opportunities to enhance diversity** and **representation** in **Japan's energy market**.
